

Senior Expert Hydrogen Systems and Electrolysers

Jappe Hoeben

Jappe joined the RWE Technology International team in 2023 to develop a new 350MWe Green Hydrogen Production Plant in the Netherlands. In his role as lot owner for the electrolyzers he leverages his experiences from many onshore and offshore Oil&Gas project executions.

Prior to joining RWE Jappe worked for over a decade in the gas turbine industry at OEMs and Service Providers in roles from sales to product development to order execution and senior rotating roles. His experiences encompasses advisory services, project execution,

manufacturing and reconditioning of gas turbine capital parts, upgrading and converting of gas turbines for (hydrogen) fuel flexibility and low emissions.

Jappe worked intensively with clients and colleagues in Europe, the Americas, Asia, Middle East and the Mediterranean. This helped him to further improve his German, English and French language and cultural skills next to his mother tongue Dutch.

He completed his studies in Mechanical Engineering jointly at the Technical University of Eindhoven and the University of California, San Diego.

1 What gives you most satisfaction in your work?

I enjoy connecting with and between international motivated and ambitious teams as well as individuals. To take on challenges with a team and to lead and support, with a holistic view, these teams to excellence is a strong driver for me.

2 Why did you choose RWE TI?

I'm grateful to be allowed to work with a group of excellent and honest colleagues.

From James Norbury: "Which is more important," asked Big Panda, : "the journey or the destination?" – "The Company," said Tiny Dragon.

3 What three words best describes you?

Open. Collaborative. Honest.

4 „Our aim is your success.“ – What it means to me:

From experience, life as well as projects can be an opera, let's try together to find that Deus ex machina you need to be successful with your challenges.
