

Head of Engineering **Michael Schütz**

Michael is a senior chemical engineer with special emphasis on to thermal and mechanical engineering and has more than 30 years of experience in the power generation business and especially in the new build and rehabilitation of plants.

During his career Michael has gained profound experience with different types (gas, lignite, hard coal, biomass) and sizes up to large-scale supercritical power plants.

He is well familiar with the planning, procurement, implementation, contracting and claim management through commissioning of the power plants and has managed interdisciplinary project teams on national and international projects.

Now he supports RWE in growing green to become a CO₂-free energy supplier as a PtX principal.

1 **What gives you most satisfaction in your work?**

The greatest satisfaction after years of planning, erection and taking into operation is, to see the fire burning, feel the vibration of the turbine and hear the noise of the transformer.

2 **Why did you choose RWE TI?**

I want to share my experience – worldwide.

3 **“Your challenge is our passion!” What it means to me:**

To make your challenge to my challenge. Working in interdisciplinary project teams on international projects anywhere is my passion – working with people!
